4/09/2009

To: RETS Users
From: Richard Torp

This letter is to inform all MRED RETS users that a new RETS server has been implemented. The new RETS server will run directly from the Dynaconnections system. The RETS server is version 1.7 and is backwards compatible to Version 1.5. The new server allows MRED to supply real time availability to data and photos. A Spreadsheet ([DynaVariman_FieldNameComparison.xls](#)) has been attached to point out the differences between the current Variman server and the Dynaconnections RETS server. A PDF document ([RETS Start Guide](#)) has also been attached explaining new limitations on number of records (2,000) that may be downloaded during peak business hours.

We are allowing until June 1st for you to migrate on to the new RETS server. If there are any issues with this time frame, contact MRED immediately to discuss this. The address for the new RETS server is:

<http://mredllc-rets.connectmls.com/rets/server/login>

Your current credentials will work on the new RETS server.
Please let me know if you have any questions.
